

Ken A. Bocking, M.Sc., P.Eng.

Mr. Bocking is a Principal of Golder Associates and Manager of the specialist Mine Waste & Environment Group in the Mississauga office. He holds an M.Sc. degree in geotechnical engineering and has over 29 years of experience in geotechnical consulting. In the past 15 years, he has been responsible for project management and geotechnical/environmental engineering of mine waste management projects. He has lead the siting, permitting, design, costing, and construction inspection for numerous tailings basin dams (and associated water management facilities) throughout Canada.

Mr. Bocking has managed the preparation and certification of numerous formal mine closure plans. Major closure plans in Canada include three for Falconbridge Limited's mine/mill/smelter complex near Sudbury, and two for the Kidd Metallurgical Complex near Timmins. Internationally, he has been responsible for closure planning at mines in Colombia, Spain and Brazil. He contributed to several documents to assist the review and assessment of closure plans by the Peruvian Ministry of Energy and Mines. He has also lectured on closure planning in Canada and Brazil.
